The username package

Andreas Klöckner

June 25, 2012

1 Usage

Simply load the package via \usepackage{username}. It will then provide the following commands.

- \userdomain holding the current user's domain:
  DLR

- \ifuserdomain to test, if user domain was correctly read.

- \username holding the current username:
  kloe_ad

- \ifusername to test, if username was correctly read.
